EDUCATION

University of Oulu, Finland <i>Ph.D in Computer Science and Engineering</i>	<i>Sep 2018 - 2023</i>
Dongguk University, South Korea <i>Master of Electronics and Electrical Engineering</i>	<i>Sep 2016 - August 2018</i>
Ha Noi University of Science and Technology, Viet Nam <i>Bachelor in Mechatronics Engineering</i>	<i>Sep 2010 - August 2015</i>

TECHNICAL SKILLS

Programming:	Python, C/C++
Software & Tools:	Pytorch, Tensorflow, Git

WORK EXPERIENCE

Senior Research Scientist - Qualcomm AI Research, Viet Nam I am focusing on building the next generation of world model and tackle the problem of scarcity of real-world robotic data.	<i>April 2025 - present</i>
Research Scientist - VinAI, Viet Nam - Leading a group of researchers and residents working on 3D Computer Vision and Generative Models. The goal is to publish papers at top tier conferences such as CVPR, ICCV, ECCV and so on. - Advising VinAI's Smart Mobility team on their computer vision applied projects such as 360 degrees Jelly View (VinFast e34) and DrunkDense (Vinfast VF8)	<i>March 2024 - March 2025</i>
Research Scientist - SpreeAI, USA - Research and develop state-of-the-art techniques for the problem of photorealistic virtual try-on. - Deploy trained model on mobile devices.	<i>Sep 2023 - February 2024</i>
PhD Student and Research Assistant - University of Oulu, Oulu, Finland <i>Advisor: Prof. Janne Heikkila and Prof. Esa Rahtu</i> - Conducting research on 3D computer vision. My main research topics are Novel View Synthesis and Digital Human. - Teaching Assistant on numerous courses such as Deep Learning, Computer Vision and Signal Processing.	<i>Sep 2018 - 2023</i>
Research Intern - NVIDIA Toronto AI Lab <i>Advisor: Sanja Fidler, Sameh Khamis, Francis Williams, Zan Gojcic, Or Litany</i> - Working on the topic of dynamic view synthesis using Neural Radiance Fields	<i>May 2022 - January 2023</i>
Research Intern - Meta Reality Labs Research, Sausalito <i>Advisor: Nikolaos Sarafianos, Christoph Lassner, Tony Tung</i> - Working on the topic of generating novel views of a dynamic human from a monocular RGBD image.	<i>May 2021 - November 2021</i>

RECENT PUBLICATIONS

- Track the Noise, Move the World: 3D-Grounded Motion Noise for Controllable Video Generation** *in submission*
Long Vu, Tan Ngo, Animesh Karnerwar, Amir Habibian, Binh Son Hua, Hung Bui, Minh Hoai Nguyen, Phong Nguyen-Ha
- PixelFlash: Eliminating the VAE Bottleneck for Ultra-Fast High-Resolution Image Generation** *in submission*
Phuc Lai, Anh Nguyen, Phong Nguyen-Ha, Anh Tran
- Cross-Space Distillation: Teaching One-Step Students with Modern Diffusion Teachers** *ECCV 2026*
Ngan Nguyen, Duc Vu, Anh Nguyen, Khoi Nguyen, Phong Nguyen-Ha, Anh Tran
- PixGS: Pixel-Space Diffusion for Direct 3D Gaussian Splat Generation** *ECCV 2026*
Duy Cao, Phong Nguyen-Ha
- SwiftTailor: Efficient 3D Garment Generation with Geometry Image Representation** *CVPR 2026 Highlights*
Phuc Pham, Uy Dieu Tran, Binh Son Hua, Phong Nguyen-Ha

AWARD

-
- | | |
|--|------|
| • Best paper award at 21st Scandinavian Conference on Image Analysis, Norrkoping, Sweden | 2019 |
| • Finalist at Qualcomm Technologies AI Developer Contest | 2017 |
